

# CR-M™

## CHEST RIG-MODULAR

S&S Precision's Chest Rig Modular (CR-M™) is the newest addition to our popular carrier system series. Designed to be a monolithic, semi-rigid load-bearing structure, the CR-M™ is a flexible yet stable platform with the adaptability to carry a variety of loadouts. The CR-M™ is manufactured using hydrophobic materials in order to reduce unwanted weight typically gained from water, moisture and sweat. The result is an ultra-lightweight, durable rig that can be customized to fit any mission set.

- Removable padded shoulder pads line with closed cell foam
- Laser cut MOLLE Abdominal Panel constructed of hydrophobic (non-water absorbing) materials
- Abdominal Panel fits up to 2 radios and 3 rifle magazines
- Optional Side Release Buckles
- Optional Laser Cut MOLLE Admin Panel accepts a variety of admin pouches and EUD platforms
- Optional Admin Panel has dual PTT attachment fields & elastic keepers
- Removable comfort foam in both panels

This extremely versatile, light-weight rig supports a variety of admin pouches and EUD platforms such as the S&S Precision's FlipLite, Admin Low Pro with PTT Wing and NAVGEAR™ products including the FlipMod™ and ZipFlip™. It is also compatible with the Operator System Suite equipment. See the compatibility chart on page 13 for more details.

◀ **Fully Loaded configuration shown here.**  
The CR-M comes in six different standard configurations, designed with different operations in mind.

[View CR-M™ configurations on page 5](#)

**This ultra-lightweight rig can be combined with a variety of modular gear options and dozens of accessories and pouches available through the Operator System Suite (OSS). See page 13 for details.**

## LOW PROFILE

The CR-M™ Low-Profile Configuration is lightweight and features a laser cut abdominal panel with MOLLE field that can fit up to two radios and three rifle magazines.

- Shoulder pads removed
- Shoulder straps woven directly into the abdominal panel

## FULLY LOADED

The CR-M™ Fully Loaded Configuration features S&S Precision's FlipLite on the optional admin panel. Attached to the abdominal panel is the SwimR Dry-Bag, Radio Pouch, and Vertical Utility Pouch. Additionally, the rear harness is shown with S&S Precision Hydration Pouch.

## ARMOR PLATES

The CR-M™ Up Armor configuration allows the operator to attach armor plates easily to the rig without having to change loadout configurations. Also shown with the new 8" x 10" Dry bag (see page 52 for details)

**PACKS, POUCHES AND OTHER ATTACHMENTS NOT INCLUDED.**

# CR-M™ LOADOUTS

The CR-M™ versatile design allows it to be specifically configured for any mission large or small, with the help of the optional admin panel and side release buckles, and the laser cut MOLLE field design. This allows the rig to support numerous types of accessories and pouches while providing modular loadouts on a quick on and off donning system.

## FLOTATION

The CR-M™ is designed to fit with the S&S Precision LiftR-40 flotation system. View our modular flotation on page 47.

## FIN RETENTION

The CR-M™ Fin Retention System is designed to carry fins securely using a removable side release buckle and bungee keeper.

## ASSAULT PACK

The CR-M™ Assault Pack configuration features the optional admin panel, which snaps directly into the backpack creating the ultimate operations assault pack.

The Fin Retention and Assault Pack configurations shown here take advantage of extra buckle attachment locations.
